

800/900 SERIES

Serial Number: 24

Part#: 201001

DewEze®

Thank you for purchasing a DewEze Flatbed.

TO THE OWNER OR OPERATOR:

As with all Harper products, the 800 and 900 Series Flatbeds have been thoroughly tested and built to provide a sturdy, dependable product. The Flatbed is equipped with live hydraulics, which allows it to be used for a wide range of lifting and hauling tasks. This manual is written as an aid to operating and maintaining the DewEze Flatbed. Read and understand the manual thoroughly before operation to avoid damage to the unit or injury to the operator or bystanders.

A Flatbed can present hazards to an operator who follows unsafe procedures in either the operation or maintenance of the unit. Therefore, **SAFETY WARNINGS** are present at certain locations in the text. Harper Industries is not responsible for accidents or injuries that result from the misuse or lack of maintenance of the Flatbed.

SYMBOL:

SAFETY WARNING!

MEANING: Failure to understand and obey this warning may result in injury to you or others. Whenever this symbol is used, please pay very close attention to the information presented, and make sure you fully understand. If you do not, contact your dealer or Harper Industries for clarification.

Statement of Warranty 1/11/2025

Harper Industries, Inc. (HII) warrants to each purchaser of new DewEze Truck Bodies from an authorized dealer or representative, that such equipment is free of manufacturer's defects in workmanship and materials which appear while in normal service for a period of TWO YEARS commencing with delivery to the original user. The Flatbed hydraulic and electrical systems are warranted for a period of ONE YEAR.

The obligation of HII under this warranty is expressly limited, at our option, to replacement or repair at a service facility designated by Harper Industries or at the manufacturing plant in Harper, KS. A part will be replaced after inspection discloses it to have been defective. This warranty does not apply to defects caused by damage or unreasonable use (including failure to provide reasonable and necessary maintenance, or by performing functions without genuine DewEze Flatbed accessories) while in the possession of the consumer.

Warranty is limited to parts, labor and ground freight delivery of replacement parts. HII shall not be liable for the consequential damages of any kind, including but not limited to consequential labor costs or transportation charges in connection with replacement or repair of defective parts.

This warranty does not apply to parts subjected to misuse, abuse, alteration, improper or inadequate maintenance, or normal wear (including belts, battery, chains, filters).

ANY IMPLIED OR STATUTORY WARRANTIES, INCLUDING ANY WARRANTY OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE EXPRESSLY LIMITED TO THE DURATION OF THIS WRITTEN WARRANTY. HII makes no other express warranty, nor is anyone authorized to make any on behalf of HII.

For further information please contact your nearest DewEze dealer.

Hydraulic System Specifications

HYDRAULIC	Engine driven pump or self-contained battery powered E/H unit
SYSTEM PRESSURE	2700 psi
OIL RESERVOIR CAPACITY	4.25 gallons
OIL SYSTEM	2.75-3.75 gallon (dependent on truck/bed length or XRM option)
OIL FILTER	Deweze 222119, IFP/Schroeder Industries 6GZ5 (5 micron)
CYLINDER, LIFT (2)	3.50" x 16.62"
PARALLEL CYLINDER, SQUEEZE	2.00" x 34.00" (870, 871, 876, & 879) 2.00" x 39.25" (976, 984, & 988)
PIVOT CYLINDER, SQUEEZE	3.00" x 5.00" 3.25" x 5.00" Rephasing
CYLINDER, EXTENDABLE*	2.00" x 20.0" (left side)
CYLINDER, EXTENDABLE*	2.50" x 20.0" (right side)

* Cylinders used for extendable arms are optional.

Protective Coating

PAINT	Urethane primer and topcoat
GATORHYDE	Long-lasting, textured polyurea surface

DewEze Bale Bed Hydraulics

Hydraulic Oil Recommendations For Clutch Pump Systems

Based on Ambient Temperature

Application Notes:

- Reduce the oil viscosity by one grade in electric drive systems to prevent oil overheating.
- For continuous operation (i.e. augers) in summer, consider using one grade higher oil viscosity.

Recommendations are only within normal operating conditions - any special application of the hydraulic system will require consideration of oil operating temperatures

Hydraulic Oil

- Fluid selection will affect hydraulic system performance.
- Consult your local oil supplier for help selecting fluid appropriate for your area. Consideration must be given between clutch pump or E/H.
- Change hydraulic oil filter after the first 40 hours, then every 250 hours or annually.
- Change contaminated or milky oil.
- Mixing fluids may cause foaming or viscosity issues.

Hydraulic System

- Replace quick-coupler o-rings if leaking.
- Heat 190° or greater may damage hydraulics. Hot spots may indicate a problem.
- Run the bed at least twice a month to prevent valve condensation
- For easy hookup of the couplers, turn the pump off leaving the valve and ignition on. Actuate function switches (squeeze/3rd bank) to relieve pressure.

Feature Identification

A. Headache Rack - Protects the rear pickup window. The hydraulic oil tank and valve are located in the headache rack.

B. Across-the-Bed Toolbox (optional) - Has a shelf mounted inside. Toolbox is 78" wide, 15.5" tall and 21.5" deep.

C & D. Spinners & Risers (optional) - Used to unroll hay. The risers allow the hugger arms to lie flat on the bed with the spinners attached.

E. Spikes (optional for pivot beds) - Used for quick lifting of a bale for transport.

F. Hugger Arms - Squeeze together to grip the bale and lift it onto the flatbed. When the arms are stored they serve as side rails for the flatbed.

G. Crosstube - Houses the squeeze cylinder and guides the hugger arms.

H. Hitch Plate - 2.5" with a 2" adapter. Has holes for hitch pins.

I. Safety Chain Loops - Always use safety chains when towing.

J. Trailer Plug Knockout - Available space to install trailer plug in the ball well.

K. Gooseneck Hitch - Located under a cover plate in the middle of the bed.

L. Safety Chain Loops - Always use safety chains when towing.

M. Lights - LED lighting for stop-tail-turn has long life and low current draw.

N. Rub Rails (optional) - Protect your straps.

O & P. Skirts & Toolboxes (optional) - Mount under front and/or rear of bed on both sides. The Electric/Hydraulic Power unit usually mounts inside the front passenger toolbox.

Q. Dummy Arms - Serve as side rail along with hugger arms.

R. Swing Lights (optional) - Lights can be pivoted out wider than the bale when working at night.

S. Wireless Receiver (optional) - Mounted near headache rack lights for better access and reception.

A. Valve Compartment – Houses the control valve.

B. Pioneer Couplers – Connect hydraulic hoses to the squeeze cylinder, may also be used to connect to implements.

C. Hydraulic Oil Fill & Sight Glass – Check hydraulic oil level with sight glass. The end of the graduated marks is "full". New installs fill to "full", run all functions, then re-fill to "full."

Safety

Operator safety is of utmost concern when designing and developing a new piece of equipment. Designers and manufacturers build in as many safety features as possible. Many accidents occur which could have been avoided by a few seconds of thought and a more careful approach to handling equipment. Most accidents can be avoided by observing the precautions in this section. To avoid personal injury, study the safety warnings and cautions listed in this manual and follow them.

General Equipment Safety

- This equipment can be dangerous to children and persons unfamiliar with its operation. Only responsible adults familiar with farm machinery and trained for this unit should operate it.
- Do not allow persons to operate or assemble this unit until they have read this manual and have developed a thorough understanding of the safety precautions and how the unit works.

- Do not attempt to operate equipment under the influence of drugs or alcohol.
- Review the safety warnings and cautions with all users annually. If you have any questions not answered in this manual or require additional copies, contact your dealer or Harper Industries.

Flatbed Operation Safety

- Ensure all safety pins are in place and flatbed mounting bolts are secure to the truck frame.
- Ensure hinges, joints, and sliding parts are well greased, especially during off season to prevent rusting and binding.
- Check with truck dealer for any load limits, additional suspension or tire requirements. The flatbed's lifting capability may exceed the truck's load capacity in some instances.
- Replace any CAUTION, WARNING, DANGER or instruction decal that is illegible or missing. Decals are available from your DewEze dealer.

SAFETY WARNING!

Raising the arms beyond center when cylinders aren't full will cause the arms to drop. Never load or unload with humans or livestock in the potential drop zone.

SAFETY WARNING!

Hydraulic fluid escaping under pressure can penetrate the skin and may cause death if not treated immediately.

SAFETY WARNING!

Operating hydraulics with air in the lines can cause injury and damage to machinery. Follow these procedures when first filling with fluid or after maintenance that could have caused air to enter the lines.

SAFETY WARNING!
It is the owner's responsibility to replace missing or damaged warning decals. Decals are available from your Deweze dealer.

15	1	202187	Decal, "Pivot" Pass. Side Arm
16	2	400014	Decal, Warning, Guard Removed

Hydraulic Safety

- Do not operate the hydraulic system with the hood open.
- Do not activate the electric clutch unless the truck engine is at idle. Operating the clutch at or above 2000 rpm will damage the pump.

INITIAL STARTUP PROCEDURE

- Fill the reservoir monitoring the level via the sight glass (approx 4.25 gal).
- Push the UNLOAD function until the arm raises to 45° angle or less, then LOAD until the arms rest on the bed. Repeat 6 times to ensure cylinders are full and air has been purged over relief.

- Check oil level at sight glass and add oil as necessary.
- With arms elevated to clear obstacles, push the UNSQUEEZE function until both arms are fully opened then SQUEEZE until both are fully closed. Repeat 6 times to ensure cylinders are full and air has been purged over relief.
- Check oil level at sight glass and add oil as necessary.

- Cylinders out of sync will rephase when Unsqueezed to end of stroke.

- If XRM is an option, push EXTEND until arms are fully out, then RETRACT. Repeat 6 times to ensure cylinders are full and air has been purged over relief.
- Check oil level at sight glass and add oil as necessary.
- Inspect system for leaks.

Operating Instructions

Remote Control Transmitter

- Instructions for synching the transmitter to the receiver are in *Appendix II*.
- Operates all functions of the flatbed using two AA batteries.
- Wireless transmitter LEDs:
Green = TRANSMIT
Red = BATTERY/DIAGNOSTICS
- The green light flashes rapidly when there is communication with the receiver.
- The red light blinks once per second if the battery is low.
- If the red light blinks a specific sequence of times, it is flashing an error code. Refer to the ERROR CODE CHART in *Appendix II*.

CAUTION: In cold weather, let engine idle for 5-10 minutes with pump on before operating arms to warm oil. Neglecting to do so may cause hydraulic pump failure.

Beginning Operation

- Turn the pump switch on the dash to the “ON” position. (Red light will indicate that pump is on).
- Press and hold the power button on the transmitter until both LEDs turn on, then release.
- The green LED will flash rapidly when the communication has been established. If the receiver is off, the red LED will flash slowly.
- Press the corresponding buttons on the transmitter keypad to turn on and off each of the outputs.

Loading

- 1) Back truck against bale with the arms wide apart and tilted slightly upward.
- 2) Lower arms down to center bale height
- 3) Squeeze bale with arms until fully engaged.
- 4) Lift the bale onto the truck.
- 5) Release the bale and repeat the operation for the second bale.

CAUTION: When hauling one bale, make sure it is held tightly and rests on the bed. When hauling two bales make sure the second bale is as far forward as possible (Fig. 1). Carrying a bale behind the bed, as shown in (Fig. 2) places excessive stress on the cylinder, linkage, and pins.

Fig. 1

Fig. 2

CAUTION: Do not exceed GVRW rating of truck when loading.

XRM - Extendable Arms (option)

- Always squeeze the bale with the arms in the retracted position.
- Extend the arms and release the bale.
- Fully retract the arms before laying them on the bed.

CAUTION: Squeezing the bale with arms extended may damage the arms and crosstube.

Unloading

- To unload, do the reverse of loading.
- Spinners may sometimes be needed to grip the front bale for unloading.

Unrolling (option)

- Use risers and spinners to unroll a bale.
- Position the arms over the bale so the spinners are at the center of the bale.
- To unroll, lower the bale to the ground.
- Turn the pump off and push the FLOAT switch on the remote control.
- Slowly drive STRAIGHT forward. The bale will gradually unroll.

CAUTION: Turning while unrolling a bale may cause hugger arms to bend.

CAUTION: Failure to use FLOAT while unrolling may damage flatbed frame or lift cylinder. The FLOAT switch on the remote transmitter stays on until it is pressed a second time or another switch is activated. To avoid power loss, always deactivate the FLOAT when not in use.

Spike/Arm Feature

CAUTION: Spikes are for lifting/transporting bales. Lifting heavier objects can damage the crosstube.

- Ensure spikes are not in use while trying to pick up or unroll a bale with the arms. Bed damage could occur.
- Store spikes when not in use.

Storing the Arms

- Close the arms partially and lay them on the flatbed.
- Open the arms until they are flush with the side of the bed. They now function with the dummy arms as side rails.

Turning System Off

- Turn the pump off when it is not in use.
- The remote control turns itself off automatically after 15 minutes.
- It is good to relieve hydraulic pressure at the end of work. Turn off the pump (clutch), but leave the valve energized. Cycle through all functions LOAD/UNLOAD, SQUEEZE/UNSQUEEZE, EXTEND/RETRACT. Then turn off the valve.

Maintenance

Check Daily or Before Use

- Ensure the hydraulic oil level is "Full" via the sight glass.
- Check the belt, belt tensioner and idler pulleys on engine clutch pump system.
- Examine the hydraulic hoses for leaks with an object such as cardboard.

SAFETY WARNING!

Use extreme caution when greasing the flatbed. Completely lower arms to expose rear zerks and turn off ignition.

Lubrication

Grease the locations indicated in the following illustrations once per week while the unit is in use and at the end of each season (same locations on right and left).

- 1-4: Idler link pins, idler arm bases, crosstube hinges, lift cylinder *rod* ends.
- 5: Lift cylinder *base* end
- 6: Spinners
- 7: Pivot Arms
- 8: Liberally apply grease to parallel arm metal-on-metal contact surfaces.

Troubleshooting

Problem	Symptom	Possible Solutions
Hydraulic Pump	No Oil Flow	● CHECK OIL LEVEL IN RESERVOIR. If oil level is low, check for leaks in system then re-fill to FULL. ● CHECK BELT TENSION. Replace tensioner or tighten idlers if needed. Replace belt if worn. ● CHECK FOR SHEARED KEY ON PUMP SHAFT. Replace key. ● CHECK IF SUCTION HOSE COLLAPSES IN SUCTION. Locate and remove obstruction. ● CLUTCH NOT FUNCTIONING. See possible clutch solutions. ● INTERNAL PUMP DAMAGE. Seek assistance from dealer.
Hydraulic Pump	No Oil Pressure	● HYDRAULIC OIL LEAKS IN SYSTEM. <u>Take safety precautions</u> and check for leaks. Tighten fittings and replace damaged hoses. ● CHECK FOR MALFUNCTIONING SWITCH. Replace switches. ● BELT OR CLUTCH MAY BE SLIPPING. Replace tensioner or tighten idlers if needed. Replace belt if worn. ● VALVE NOT FUNCTIONING. Check for disconnected wires at solenoid or rusted ground wires. Seek assistance from dealer if valve continues to be unresponsive. ● PRESSURE RELIEF MAY BE SET TOO LOW OR BROKEN. Seek assistance from dealer. FACTORY RECOMMENDS 2700 psi: ● PUMP IS WORN OR DAMAGED. Seek assistance from dealer.
Clutch	Does Not Engage	● CHECK FOR BLOWN FUSE. Replace fuse. CAUTION: FUSE SHOULD NOT EXCEED 30 AMPS ● CHECK WIRE TO CLUTCH. Insure there are no breaks or shorts. ● CHECK FOR BAD SWITCHES IN SYSTEM. Replace switches. ● CLUTCH IS WORN OUT. Seek assistance from dealer.
Belt(s)	Jumps Off Pulley	● BELT(S) TOO LOOSE. Replace tensioner or tighten idler pulleys. ● CHECK FOR EXCESSIVE BELT WEAR. Replace worn belt(s). ● CHECK FOR LOOSE PUMP BRACKET. Tighten loose bolts. Replace broken bolts. ● CHECK CRANKSHAFT PULLEY FOR LOOSE OR BROKEN BOLTS. Tighten loose bolts. Replace broken bolts. ● CHECK ALIGNMENT OF IDLER PULLEYS AND CONDITION OF BEARINGS. Re-align idler pulleys or replace worn idler pulleys. ● CHECK ALIGNMENT OF CLUTCH AND CRANKSHAFT PULLEY. If misalignment is visible, seek assistance from dealer.
Arms: Squeeze or Extend	Cylinder is out of sync	● Extend arms all the way out. ● CYLINDERS PLUMBED WRONG OR LEAKS: Re-check plumbing and check for any hydraulic oil leaks that may be present ● BLEED AIR OVER RELIEF. Hold switches in each position for over 60 seconds to ensure air pockets are bled. ● CYLINDER OR SEALS ARE BAD: Replace cylinder or seal kit

GatorHyde Repair Instructions

Required items:

- 1 – 25 x 25 ml caulking gun (202030)
- 1 – 25 x 25 ml cartridge set of GatorHyde Repair Material (202031)
- 1 – ¼" x 6" mixing wand (202032)
- 1 – pair of rubber gloves
- 1 – wooden stick
- 1 – Instruction sheet and MSDS sheet
- 1 – MEK – methyl ethyl ketone solvent (available at most hardware stores)
- 1 – small paint brush
- 2 – plastic cups

SAFETY WARNING!

Read the Master Safety Data Sheets (MSDS) on all chemicals before handling any chemical.

See: <http://www.msds.com>

Note:

This repair is designed to easily fix small, damaged areas fast and with limited amount of effort. However this product is fast reacting so make sure to thoroughly read this instruction sheet before proceeding with repairs.

Application Instruction:

- Step 1.** Before you start, put on rubber gloves and safety glasses.
- Step 2.** Place a piece of cardboard or newspaper next to the repair area prior to opening and mixing the material.
- Step 3.** Cut back damaged area with a razor knife to make a square.
- Step 4.** Sand area and feather edges with 40 grit sandpaper. Blow out sanded area to get rid of dust.
- Step 5.** Clean area well with MEK solvent and allow to dry for 30 minutes.
- Step 6.** Attach static mixing wand to 25 x 25 ml cartridge set, twist and lock in place. Insert cartridge into caulking gun.
- Step 7.** Hold the caulking gun in an upright position in one hand, then set the two plastic cups on a flat surface side by side. Next point the static mixing wand into a cup and squeeze the trigger of the gun two times so a small amount of material is discharged into the cup. (Note! This material is to be discarded.) Immediately move the static mixing wand over and point it into the next cup and continue to discharge the remaining amount of material into this cup.
- Step 8.** Allow the material to set in cup and gently stir with wooden stick for a period of 1 to 1 ½ minutes or until the GatorHyde becomes thicker and will stick to either a finger or wooden stick.
- Step 9.** Once material has begun to gel, apply enough product to finger or a stick and immediately dab onto damaged area. Use the paint brush to dab the area in a vertical manner to make a textured surface.
- Cure time.** Allow repaired area to cure for a period of 1 hour prior to heavy impact loading.
- Clean-up.** In order to clean up the area take a paper sack or plastic trash bag and place all the empty jars and remaining contents of the repair kit and dispose into a standard trash can or simply put everything back in the box and throw away.

GatorHyde Protective Coatings, Inc., 2210 South Highway 69, Wagoner, OK 74467 * (918) 485-2835 *
www.gatorhyde.com

Appendix II

Remote Control

SYNCHRONIZING TRANSMITTER AND RECEIVER

To teach the transmitter ID code to the receiver, use the following procedure:

1. Make sure the receiver and transmitter are OFF.
2. Press and hold transmitter's button 1 and 8 (as shown) then press Power button until both LEDs start blinking, then release buttons.
3. Apply power to the receiver.
4. Wait for ~5 seconds or until the green LED on the transmitter starts blinking rapidly.
5. Teach complete.

TRANSMITTER ERROR CODE CHART

ERROR CODE	PROBABLE CAUSE
1	LOW BATTERY
2	FAULTY CIRCUIT TO OUTPUT A
3	FAULTY CIRCUIT TO OUTPUT B
4	FAULTY CIRCUIT TO OUTPUT C
5	FAULTY CIRCUIT TO OUTPUT D
6	FAULTY CIRCUIT TO OUTPUT E
7	FAULTY CIRCUIT TO OUTPUT F
8	FAULTY CIRCUIT TO OUTPUT G
9	FAULTY CIRCUIT TO OUTPUT H
10	FAULTY CIRCUIT TO LIGHT OUTPUT

ERROR CODE IS THE NUMBER OF RED BLINKS BETWEEN EVERY PAUSE.

SYSTEM OPERATION:

Press and hold the power button on the transmitter until both LEDs turn on, then release. The green LED will flash rapidly when communication has been established. When the receiver is off, the red LED will flash slowly indicating this. With the receiver on, press the corresponding buttons on the transmitter keypad to turn on and off each of the outputs.

INDICATOR LIGHTS:

The transmitter has two LED indicators, the red BATTERY/DIAGNOSTIC indicator and the green TRANSMIT indicator. The green TRANSMIT indicator flashes rapidly whenever there is communication between the transmitter and the receiver. The red BATTERY/DIAGNOSTIC indicator blinks once per second when the battery voltage is low. It also blinks when there is a problem with the system in the form of an error code. Refer to the ERROR CODE CHART tables for more information.

Note: To check for low battery, turn the receiver off and leave the transmitter on. If the transmitter red LED continues to blink, the battery is low. If the red LED blinks only when the receiver is ON, count the number of blinks and refer to the ERROR CODE CHART.

SLEEP TIME:

The transmitter is factory set to turn off (sleep) after 15 minutes. Use the following procedure to change the time before sleep mode.

1. Press and hold 3 (UNLOAD), 4 (SQUEEZE), 8 (FLOAT) and POWER
2. Release the buttons and both lights should blink once per second.
3. Choose one of the following buttons:
 - a. 1 (UNLOAD) = 15 min
 - b. 2 (LOAD) = 30 min
 - c. 3 (UNLOAD) = 1 hr
 - d. 4 (SQUEEZE) = 2 hr
 - e. 8 (FLOAT) = sleep disabled.

PROGRAMMING OUTPUTS:

The Kar-Tech transmitter can be programmed for different machines. Follow steps to ensure correct mode is enabled.

BALE BED

1. Ensure transmitter and receiver are in sync
2. Turn OFF receiver and turn transmitter ON
3. Press and hold buttons 1 (UNLOAD), 4 (SQUEEZE), & 8 (FLOAT). Red LED will start blinking.
4. Turn ON receiver
5. Hold and release button 2 (LOAD).
6. Hold and release POWER button to save and exit the config mode.

SPECIFICATIONS:

RF Transmit power (EIRP): 10 mW
 RF Frequency: 902-928 MHz
 Operating temperature - Radio: -40C to +85C
 Battery life (min): 30 hours continuous.
 Vibration: 3G to 200Hz
 Outputs: 5A max each (20A system max)

Appendix III

Heavy Duty E/H Power Kit

* Read all instructions first. See page 52

- Use cover plate to locate cutout in right side of toolbox.
- Use access cover or edge molding to protect hoses.
- Drill holes for 3/8" bolts as indicated and bolt pump to inside of toolbox.

E/H CONTROL

- Attach power harness as indicated.
- Attach 30-amp fuse holder to positive terminal on battery. Run wire through switch on dash and then to the red wire on the harness.
- Attach suction hose and pressure hose to pump with adapters provided.
- Attach suction hose to bottom of reservoir.
- Run battery cables through hole in toolbox and attach to E/H motor as indicated.
- Run battery cables along frame rail and attach black cable to negative terminal on battery.
- Attach 200-amp fuse holder to positive battery terminal.
- Insert 200-amp fuse.
- Attach red cable from E/H on top of “ice cube” fuse. Install rubber cap.

If installing the 735021 Switch Unit — Read the E/H Hybrid specific instructions first. Pg. 53

8	2	132127	Switch, Momentary (On)-Off-(On)
9	1	202003	Decal, Switch Identification

800/900 ELECTRICAL HARNESSES

All grounds must tie to the negative battery terminal. 800/900 series beds have a special grounded bolt near the driver's side headache rack for easy grounding.

Power is routed from the battery to switches in the cab, then one to clutch and one to valve.

EH Battery & Ground 2ga cable

EH Battery & Ground 2ga cable

EH Adapter

The clutch has a single wire that must go to an on/off switch in the cab. DeweZe recommends separate switches; one for the clutch and one for the valve. DeweZe uses upfitter Aux 1 for the clutch and Aux 2 for the valve. Without upfitter switches, we install two SPST switches in the dash.

E/H HYBRID INSTRUCTIONS

1. Label the 48" paired cables. Will aid in troubleshooting.
2. Drill holes in back wall and floor of toolbox.
3. Mount Switch Unit on back wall
4. Install battery tray and battery on floor
5. Attach 200 amp fuse holder to positive battery terminal
6. Attach battery cables as indicated on wiring diagram.

WARNING

This battery area/compartment is designed for the use of non-vented batteries only. Do not place a battery that requires venting into this area/compartment. Vented batteries can release poisonous and flammable gases. Can lead to a fire or explosion and result in death or serious injury.

REAR VIEW CAMERA MOUNTING KITS *

***Mount Disclaimer:** These mounting kits were designed for the most common mounting-to-camera. Manufacturers change camera styles & mountings even within the same year. Use best practices to modify if need be.

***Installer note:** DewEze does not engineer wiring nor harnesses for the camera. It is the installers' responsibility to trace the OEM cable to re-attach.
